

POLYURETHANE SYSTEM

TECHNICAL INFORMATION

Date of preparation: 01.07.2019 Updated date: 12.01.2022

Version: 3/EN

1. PRODUCT DESCRIPTION

EKOPRODUR S0540D is a two-component system designed for the production of closed-cell self-extinguishing rigid polyurethane foam.

| COMPONENT POLY (polyol mixture) | EKOPRODUR S0540D POLY |
|---------------------------------|-----------------------|
| COMPONENT ISO (isocyanate) | ISO COMPONENT B 2 |

2. APPLICATION

EKOPRODUR S0540D is designed to perform external thermal insulation of roofs, foundations and internal thermal insulation of floors (flooring) by spraying.

3. COMPONENTS CHARACTERISTICS

COMPONENT POLY - formulated polyols mixture in the form of oily liquid without suspension, from light red to dark brown depending on the production batch.

COMPONENT ISO - mixture of aromatic polyisocyanates, especially diphenylmethane diisocyanate. Brown liquid without suspension.

| Parameter | POLY | ISO | Unit |
|-------------------|-------------|-------------|-------|
| Density at 20°C | 1,17 ± 0,02 | 1,22 ± 0,02 | g/cm³ |
| Viscosity at 20°C | 450 ± 100 | 350 ± 100 | mPa∙s |

4. FOAMING CHARACTERISTICS IN **LABOLATORY CONDITIONS**

Reaction times as well as apparent core density were measured under the laboratory conditions (at 20°C).

| Parameter | Value | Unit | |
|---|------------|-------|--|
| The volumetric ratio of components POLY:ISO | 100 : 100 | | |
| Cream time | 5 ± 1 | S | |
| Gel time | 11 ± 1 | S | |
| Tack free time | 13 ± 1 | S | |
| Apparent core density | 58,0 ± 1,5 | kg/m³ | |

5. RECOMMENDED PROCESSING CONDITIONS

EKOPRODUR S0540D is processed with the help of specialized high pressure machine, equipped with a spray head.

The recommendations are based on experience in applying the foam spray with the machine Graco Reactor H-XP3 with the gun PROBLER P2 ELITE (01 mixing chamber).

| The volumetric ratio of components POLY: ISO | 100 : 100 | | |
|--|---------------------------|--------------|--|
| Temperature settings on the machine | | | |
| Parameter | Value | Unit | |
| Heating temperature ISO and POLY | 35 – 45 | °C | |
| Heating the hoses | 35 – 45 | °C | |
| Components pressure | 70 – 110 (1015 – 1595) | Bar (psi) | |

| Optimal processing conditions | | | |
|--|---------|----|--|
| Components temperature in barrels | 15 – 30 | °C | |
| Ambient temperature | 10 – 35 | °C | |
| Recommended temperature of the surface | 15 – 50 | °C | |
| Relative ambient humidity | ≤ 70 | % | |
| Humidity of porous base | < 15 | % | |
| Humidity of non-porous base | 0 | % | |

Insulated surfaces should be prepared before, should not contain dust, water, oil, loose particles and other substances that could reduce the adhesion of the foam.

Before performing the spraying, the insulated as well as adjacent surfaces such as windows, doors, floors, furniture, etc., should be protected to prevent accidental contamination during spraying - keep in mind that sprayed foam has very good adhesion and can be difficult to remove from the undesired sites.

Pressure setting for Component POLY and the Component ISO should be the same. To achieve proper insulation layer you should do spraying of at least 2-3 uniform spray foam layers so that the total thickness of the insulation is not less than 30 mm. All layers of the insulation should be done during one day. If the foam is exposed to direct UV radiation (e.g. sunlight), it should be protected.

IMPORTANT: Do not exceed the recommended thickness of the layers maximum thickness is 20 mm.

We recommend that between spraying subsequent insulating layers you wait until the foam stabilizes (layer temperature below 30°C).

During processing the system please keep in mind all tips and information included in the MSDS sheets for both components.

6. PROPERTIES OF SPRAYED FOAM

The measurements were carried out on foam cut from samples made using a special spraying machine.

| Parameter | Value | Unit | Norm |
|---|--|---------|---------------------|
| Apparent density | ≥ 60 | kg/m³ | PN-EN 1602 |
| Flammability class | E B _{ROOF} (t ₁) | - | PN-EN 13501-1+A1 |
| | B2 | - | DIN 4120 |
| Short-term water absorption by partial immersion, W _P | ≤ 0,11 | kg/m² | PN-EN 1609 |
| Thermal conductivity \[\lambda_{\text{mean, i}} \] | 0,022 | W/(m·K) | PN-EN 12667 |
| Thermal conductivity, | 0,023 | W/(m·K) | PN-EN 12667 |
| Value to aging, λ_D for the thickness: | | W/(m·K) | PN-EN 12667 |
| d _N < 40 mm | 0,029 | W/(m·K) | PN-EN 12667 |
| 40 mm < d _N < 60 mm | 0,028 | | |
| d _N >80 mm | 0,027 | | |
| Compressive stress at 10% relative deformation, σ_{10} | ≥ 300 | kPa | PN-EN 826 |

POLYURETHANE SYSTEM

TECHNICAL INFORMATION

Date of preparation: 01.07.2019 Updated date: 12.01.2022

Version: 3/EN

| Resistance coefficient of water vapour diffusion, μ | 165 | - | PN-EN 12086 |
|--|---------------------------|-----|-------------------|
| Dimensional stability at defined temperature: 70°C, 90% RH, after 48 h | l ≤ 4 w ≤ 4 t ≤ 1 | % | PN-EN 1604 |
| Dimensional stability: -30°C, after 48 h | l ≤ 2 w ≤ 2 t ≤ 0,5 | % | PN-EN 1604 |
| Adhesion of the foam perpendicularly to the surface | ≥ 400 | kPa | PN-EN 1607 |
| Closed-cell content | ≥ 90 | % | PN-EN ISO 4590 |
| Total relative deformation: 48h, 20 kPa, 80°C | ≤ 0,95 | % | PN-EN 1605 |

Foam obtains its final properties after 24h conditioning

7. PACKAGING

Metal drums with a capacity 216 dm3, IBC with a capacity a 1000 dm3. It is possible to deliver in other packages agreed with the recipient.

8. RECOMMENDED STORAGE CONDITIONS

Both components should be stored in tightly closed containers in dry rooms with a temperature 15 - 25°C. Protect from moisture and direct sunlight. Shelf life is a 3 MONTHS for component POLY and 6 MONTHS for component ISO from the date production for the originally closed packaging, stored under recommended conditions. In the case of special shipments, please contact the appropriate person form the logistic department in order to select the correct packaging (other requirements).

9. REGULATORY AFFAIRS AND CERTIFICATS

- EKOPRODUR S0540D does not contain any foaming agents that deplete the ozone layer. This is in accordance with the provisions of the European Union (EU) Regulation on Ozone Depleting Substances (ODS Regulation) - No. 1005/2009 dated September, 16th 2009
- This polyurethane system has been introduced to the market in accordance with the EU Regulation No. 305/2011, together with an assessment of the performance made in accordance with the European harmonized standard EN 14315-1:2013
- This product has CE marking and Declaration of Performance No. 10DOP-2019-PL
- Approved by the Polish National Institute of Health, hygienic certificate no: BK/B/0429/02/2019
- ADR/RID, IMDG, ICAO/IATA transport regulations do not apply to the transport of this product.

10. ADDITIONAL INFORMATION

Data included in this technical information are based on the results from the tests performed in our laboratory as well as on the practical experience. These data do not guarantee the properties of the final product. The results obtained may differ from those listed above especially in the case when the use of the product is under the conditions other than originally intended.

IMPORTANT: We are happy to provide technical and substantive assistance in implementing and applying polyurethane system EKOPRODUR S0540D. At the same time when it is necessary and possible we help in adjusting relevant parameters. In all matters related to the purchase and use of polyurethane system EKOPRODUR S0540D we encourage you to use a direct contact to our technical and commercial representative or by writing to prodex@pcc.eu .
